

Installation instruction Multi Flash C

No time for manuals? No problem, this will only take a few minutes of your time to read it and the installation of your new Multi Flash C is done fast and easy :-)

The Multi Flash C (The "C" stands for "Constant frequency") convert any flasher frequency or even a permanent switched on output of the OEM flasher relay to about 90 flashes per minute, regardless what the oem flasher relay "offer".

Color	Description
Violet (thin)	This is connected with the left output of the original flasher relay what was connected with the indicators
Brown (thin)	This is connected with the right output of the original flasher relay what was connected with the indicators
Red (thick)	+ 12 Power from ignition switch
Violet (thick)	Output left flasher
Brown	Output right flasher
Black	Ground

Note:

The outputs can control all kind of 12 Volt led flashers and "traditional" halogen bulbs up to 60 Watt per side. Just cut the cables from the original flasher relay to the indicators and connect the Multi Flash C between the cables. **Please install the Multi Flash C as far as possible from the ignition cables. An installation at the bike with a short distance to the ignition result sometimes in "funny" unwanted functions of the Multi Flasher C due to electrostatic disturbances.**

The Multi Flash C installation in CAN bus bikes is not possible in some cases. Some bikes increase the indicator frequency in the dashboard led when the load is out of the required range of the system or will generate an error message. In this case is the Vari Load the better solution.

The Multi Flasher C should be installed by professional well trained engineers. Please check your local regulations regarding the traffic light rules in your country before use the Multi Flasher Plus in your bike. Please be aware that we are not responsible for any hazards, damages or disadvantages due to the use of this device. We also declare that the Multi Flasher Plus is conform to the CE and ROHS regulations for the European market. We tried to keep the functions of the Multi Flasher Plus and this manual as simple as possible. However, please don't hesitate to contact us at info@elektronikbox.de if you have any questions during the installation.

We wish you to have a lot of fun with your new Multi Flasher Plus in your bike and of course always Ride Safe!
